t. the human brain

Ans

✓

1. stpqr

✗

2. sqtpr

✗

3. tpsqr

✗

4. qtspr

Question ID : 3786061118

Status : Answered

Chosen Option : 1

Comprehension:

Read the passage carefully and answer the questions:

The term fourth wall is used in theatre. Fourth wall refers to the imaginary wall between actors on the stage and the audience. There is actually no such wall, but the actors on stage just pretend that there is a wall which prevents the audience to see or hear them so that they remain absorbed in their world of fiction. It is the hypothetical opaque partition. You as an audience can see them but they cannot see you. This fourth wall was often broken in Elizabethan and Restoration drama. Actors would frequently run off the stage into the audience, involve them in the main narrative, and allow them space in asides and jokes. Breaking the fourth wall, which may be an occasional theatrical practice, is a common technique in folk theatre. In mainstream theatre, when the performer acknowledges the presence of the audience and decides to speak directly to them, they are said to be breaking the fourth wall. In film or T.V. the fourth wall disappears when someone decides to connect with the audience and starts speaking right into the camera rather than to the other characters. It can be a refreshing experience as it would make you feel part of the performance while you are watching the play. Of course, audience involvement will bring uncertainties but these can be imaginatively managed.

SubQuestion No : 11

Q.11 The passage makes a case for breaking the fourth wall as it would:

- Ans
1. be an opaque partition
2. make the actors pretend that there is a wall
3. bring uncertainties
4. be refreshing for the audience

Section : Reasoning

Q.1 Consider the symbols ^, \$, &, @, and % and the various meanings associated with them as follows:

- 'A ^ B' means 'A is not greater than B'
- 'A \$ B' means 'A is neither greater than nor smaller than B'
- 'A & B' means 'A is neither smaller than nor equal to B'
- 'A @ B' means 'A is not smaller than B'
- 'A % B' means 'A is neither greater than nor equal to B'

Consider the following statements and conclusions and decide which conclusion(s) is/are true.

Statements: S ^ T; T \$ M; M @ K

- Conclusions:
- I. S ^ K
- II. K ^ T

- Ans
1. Both conclusions I and II are true.
2. None of the conclusions is true.
3. Only conclusion I is true.
4. Only conclusion II is true.
