Option 4 ID : 4410095938749

Chosen Option : 2

Comprehension:

Read the following passage carefully and choose the best answer to each question out of the four alternatives.

According to UN Secretary General António Guterres, the earth has entered the era of global boiling. Scorching heatwaves, devastating floods and erratic weather patterns are stark reminders of an urgent need to address the triple-planetary crisis of biodiversity loss, climate change and pollution. The world is not just grappling with climate change, but also with another silent killer - air pollution, which is claiming lives more rapidly than we can fathom. Global health statistics reveal a disturbing scenario with lung cancer claiming 10 million deaths worldwide in 2020, as stated in the World Health Organisation (WHO) factsheet published in 2023. This could soar by another 3.2 million by 2050, according to a report, 'Mapping of global, regional and national incidence, mortality and mortality-to-incidence ratio of lung cancer in 2020 and 2050' by the Indian National Institute of Health. South Asia, home to two billion people, is also home to nine of the world's 10 most polluted cities, including Delhi, where the air quality continues to pose a perilous long-term threat, putting its inhabitants at risk each day. While policy measures have led to statistical improvements in the Air Quality Index (AQI), the health risks associated with Delhi's polluted air persist.

SubQuestion No : 11

Q.11 Which of the following most accurately states the main idea of the passage?

- Ans  1. Nations are uniformly successful in reducing air pollution.
-  2. Climate change is mainly caused by human lifestyle choices.
-  3. Delhi's pollution is the only crisis discussed.
-  4. Global warming and pollution pose severe health dangers.
